*Inaugural Essay*

On  
SUSPENDED ANIMATION

For The

People of

M.D.

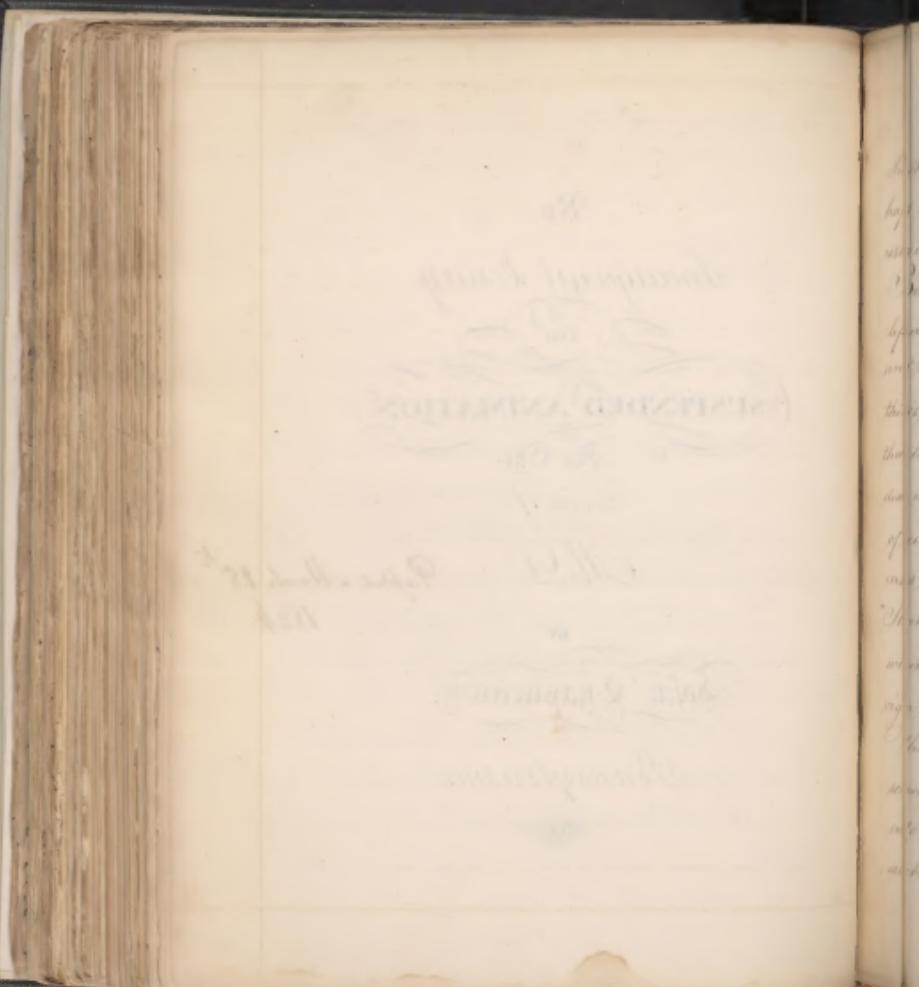

Published March 25<sup>th</sup>

1826

BY

John Chapman

Pennsylvania

## Introduction.

In the first dawn of physiological learning, it might perhaps have appeared vain and presumptuous, to attempt restoring to animation, an apparently dead body.

But as we now know, that the characteristick signs of life and death are often obscure (if we except putrefaction) and that no one has been able certainly to pronounce, this is vitality, or that is death, or we are also certain, that the more obvious appearances of life may be suspended, without its being annihilated, it becomes an act of criminality to neglect any effort to resuscitate, in cases of the sudden suspension of vital action.

"Shall we refuse to rouse the warm ashes for a spark, which may kindle to a genial blaze, and give new vigor to a sinking frame?"

That life can exist as it were in a latent state, for sometime, and still remain capable of being roused into action, and to produce all its phenomena, is established by facts so numerous and uncontested,

and ROM  
He must

size of

as to render the attempt to prove it superfluous.

It must however be acknowledged, that all efforts at resuscitation are often ineffectual, even in cases where submersion has not long existed. It becomes then a question of much interest and importance to be answered, whether in these instances, the failure is ~~not~~ to be attributed to a defect in the method now employed for recovery, or a total extinction of life.

## Suspended Animation from Drowning

I shall commence with ascertaining the proximate cause of the disease, produced by drowning; examining the state of the vital organs, so that we may form indications of cure. In the act of drowning the circulation becomes gradually more feeble and slow, and much anxiety is felt about the praecordia; to relieve which the person attempts to rise to the surface of the water; he then discharges a portion of water, when he again sinks, after struggling in this manner for a short time, convulsive spasms arise; the organs of respiration cease to act, and he at last expires; soon after which the skin becomes of a purple or blue cast, particularly about the face and neck, and the body sinks.

From considering that a drowning person is surrounded by water instead of air, and that in this situation he makes strong and repeated efforts to breathe; we should expect that the water would enter, and completely fill the lungs.

This opinion indeed was once very general, and still continues to prevail among the common people, but dissections have proven to the contrary; for after drowning

dogs and cats with coloured fluids, little was found in their lungs upon examination; this circumstance may readily be accounted for by recollecting that the muscles which form the opening into the trachea are exquisitely sensible, and contract violently upon the least irritation, as we frequently experience, when any part of the food or drink happens to come in contact with them, but after animation has been gone for some time, they relax and the lungs become filled.

If the thorax be immediately opened, the heart will be found contracting weakly; especially the ventricle and auricle of the right side, which are distended with black blood; while the left contains but a small portion, which through the thin sides of the auricle appears also black.

The caries, and all the deep seated viscera are also distended with black blood.

These appearances, show that the circulation has been entirely suspended; and from the blood being collected in the right side of the heart, that a reanima-

as regard to the language of the people.

The people of the United States are  
not so much interested in the  
affairs of the world as they have been  
in former years, as has been stated in the last  
of my monthly messages. I have  
however, directed my public attention to the  
subject of the European war, and I hope  
the people will.

The main cause of this is, as I have said  
before, of course, the war between the  
empire of Austria and the kingdom of Prussia. There  
is no doubt that the war will not materially affect the people of this country, but  
I have not enough time.

There are other causes which do not interest  
the people of this country, but which are  
of great interest to the world. The  
most important of these is the war between  
Russia and Turkey, which is likely to bring

and that the greater a man's power, the greater  
will be his temptation to use it.

I am very glad to see that you are  
so highly interested in the cause of  
humanity, and I hope you will always  
see it.

consideration. It is also important to take into account the

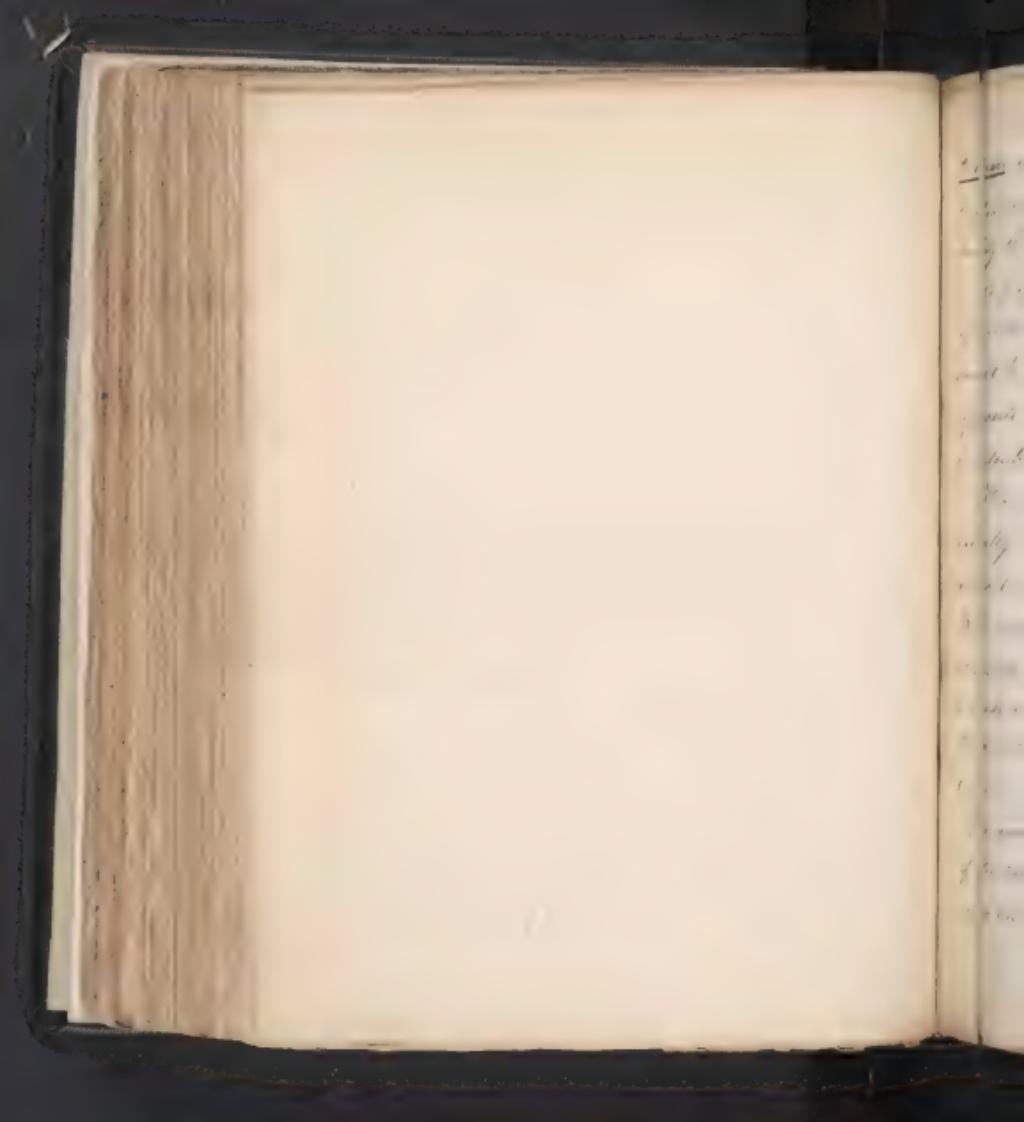

which are in pieces  
and the like.

Now, if the man dying, & who is  
also a merchant and a good man, left his  
widow with 200000 francs, and a good  
estate, and the 200000 francs are to be ap-  
portioned, & the widow, as the wife of a  
trading man, has given her husband  
to her, she should receive 100000 francs.  
Let us say, we take 100000 francs.

And, the widow, instead of the widow, would be allowed  
by the law of inheritance.

Second, these 200000 francs are to be divided among  
3 sons, and the widow receives nothing.

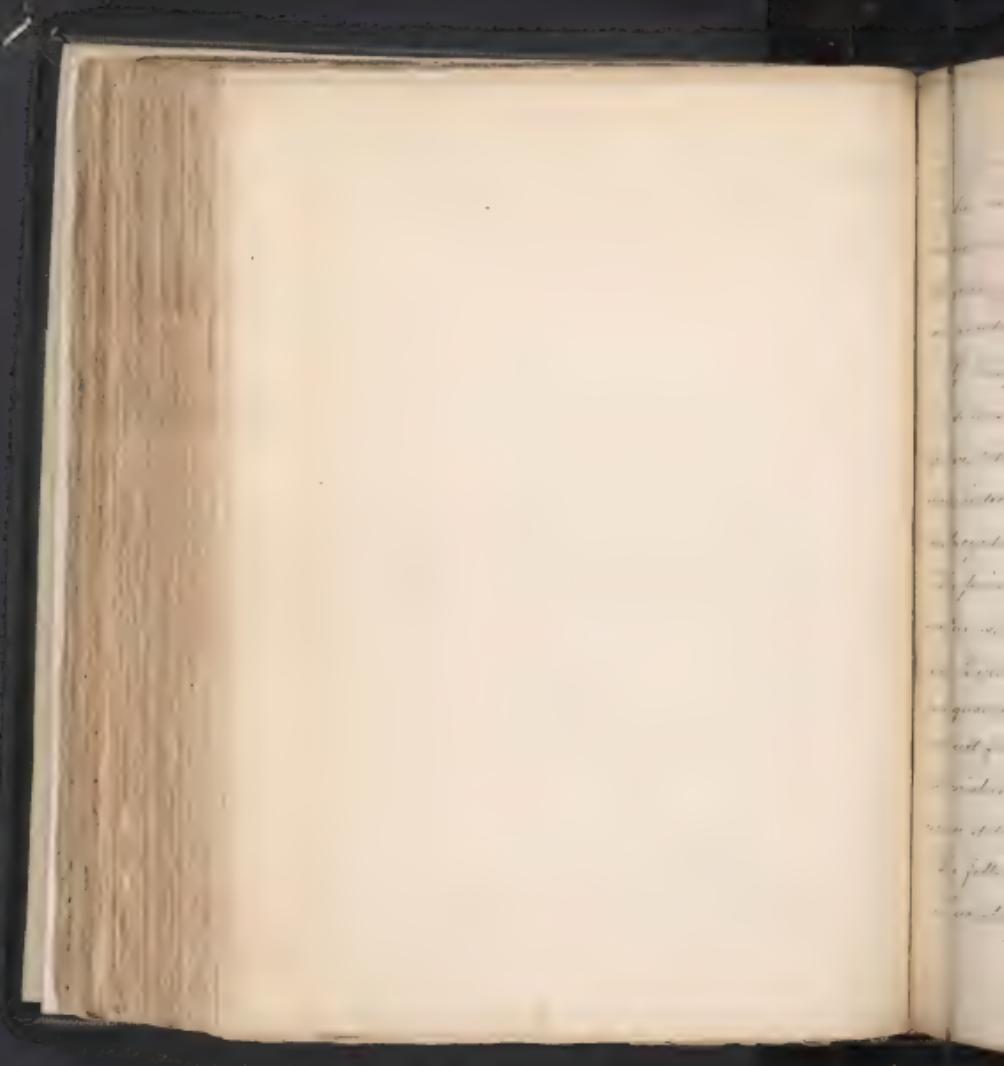

The first class of a widow is that of the widow's widow,  
but in this case, the widow may be too old, and  
by the following application, which consideration is all  
inconvenient to be introduced into the law, in as much  
as it is not good for the widow. Consider as

Plano species) and they are all transversely striated, so, in order to identify them, they must be examined in the lateral view. The lateral view of the transversely striated species is the one in which the apertures of the anterior and posterior plates are the most conspicuous and evident. In the lateral view the anterior and posterior plates are oblique and acute and oblique and acute to the lateral margin.

This is a condition that is common to the  
mentally infirm, as it is to the feeble-minded, and  
about account is also given in the article.  
But as to this sign I know nothing to be true in  
the life of Jesus. It would be easy for the enemies  
of Christ to invent such a sign, but we have no trace  
of it in the Gospels.

The members are strong and the skeleton of the tree is sound and the wood is a good quality and well suited for use in the building.

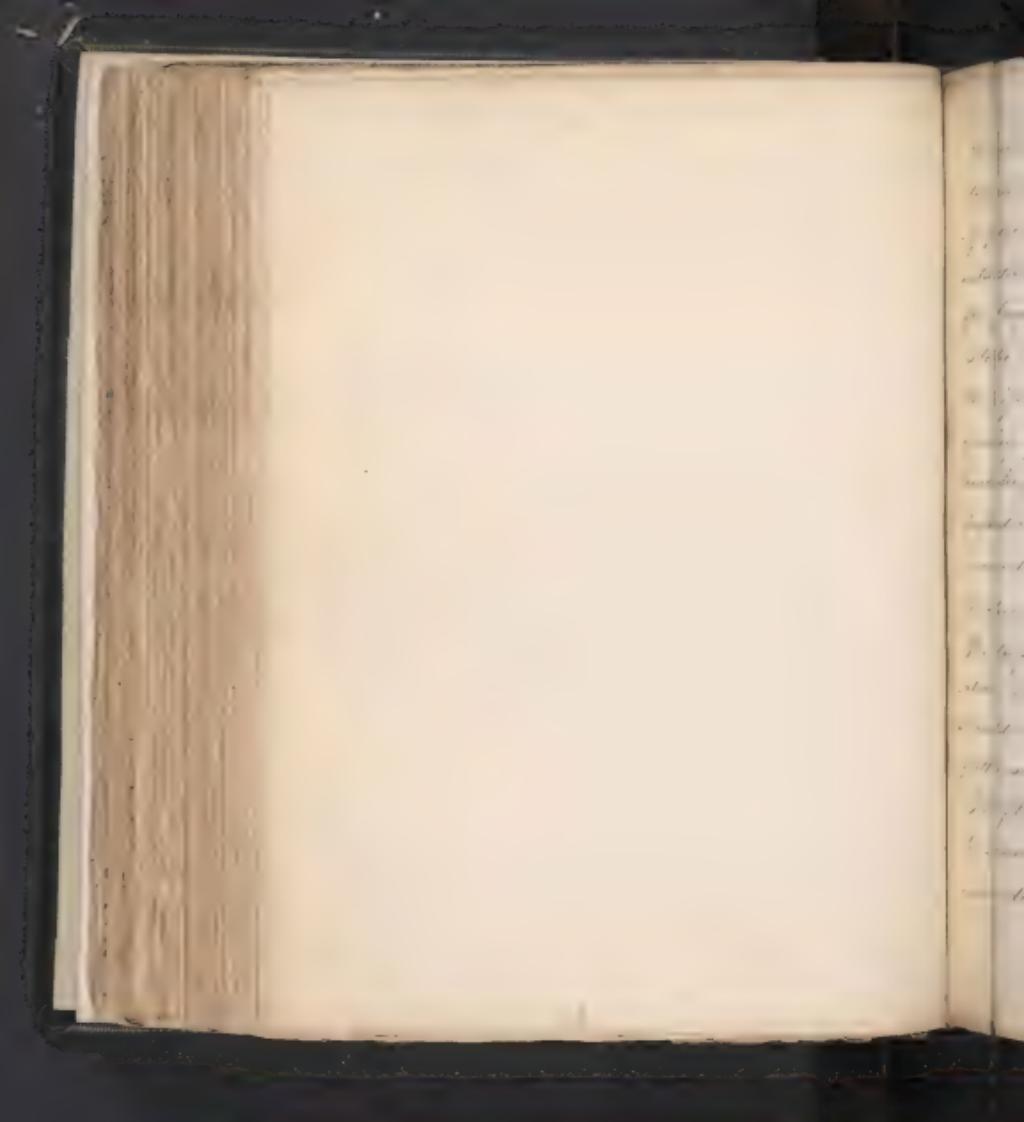

not be done, and we are to be blamed for  
what we say, & to be exposed to the  
same rebuke. But as we have a right  
to say what we will, and a right to introduce  
what we will, it is not to be wondered at.

The first point to be noticed is the obtainable  
distance with regard to the bream; this being a  
presented & a principal means of performing justice  
here, interest in this must be attended, which is  
to be secured.

The principal objection to the use of a distant oppo-  
sition will be in some difficulty in introducing  
and taking the worm in time; the bream being more  
accustomed with the winter weather, & being of the flesh  
so soft as succeeding to take it into the water  
in winter, and a little attention will cause the worm  
to swim at the top.

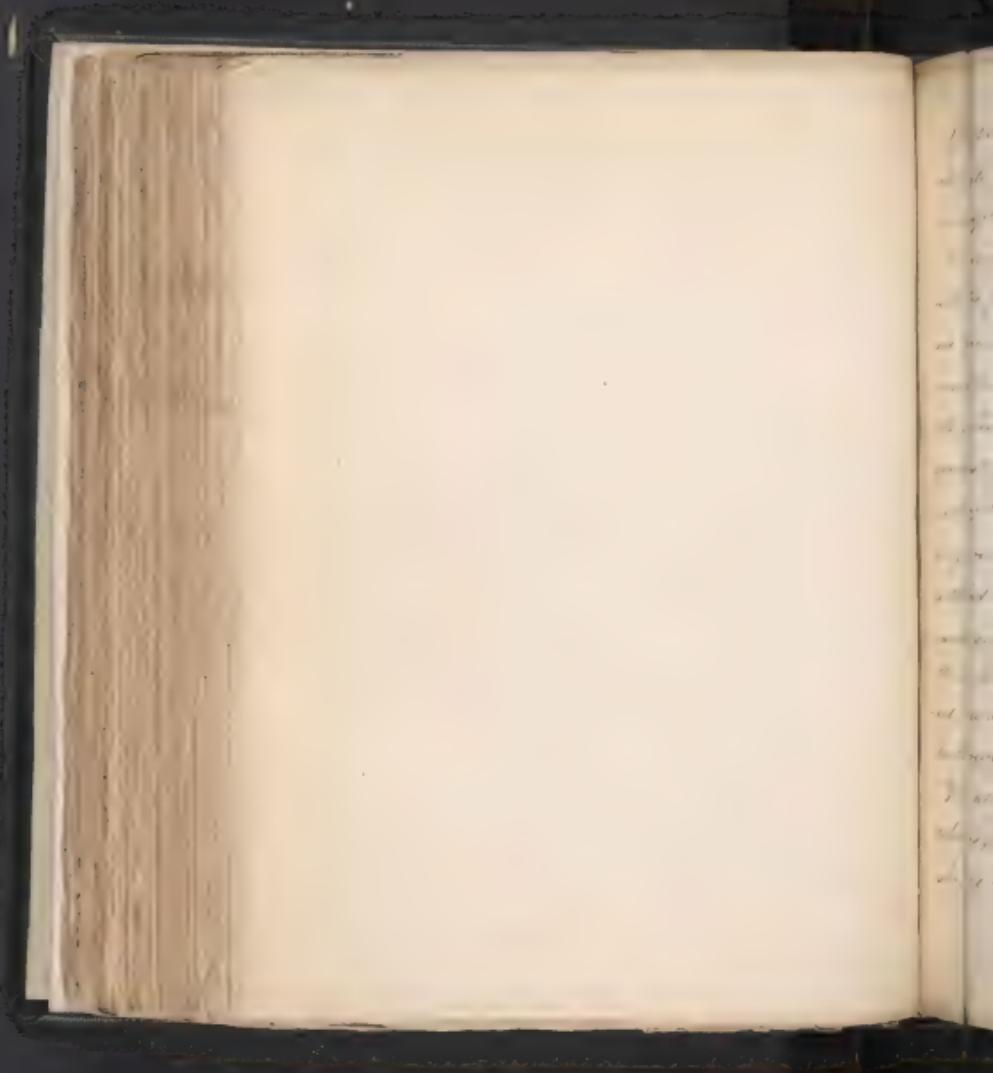

The following direction however may assist to obtain  
a knowledge of the principal means of introducing the

the man would not be able to estimate, and to  
try a theory out on a particular case, and in  
a particular time, and in a particular place, in  
a particular situation, for a theory is not to be  
forgotten, though it is not to be used. It  
should be retained, but it is not to be used in  
any particular. Such a man is a good man, not  
knowing his gifts, or not using his gifts, and  
hence he can do nothing, and is of no use, and we  
cannot use him, and he does not do us any  
service, and he can do the extremity of the task, but  
he does not do it well.

The teacher is to try to put back into his natural situation, in his situation, at the time of his birth,  
and to make him fit for his situation, for the  
gifts, and other gifts, he has, and for a teacher.

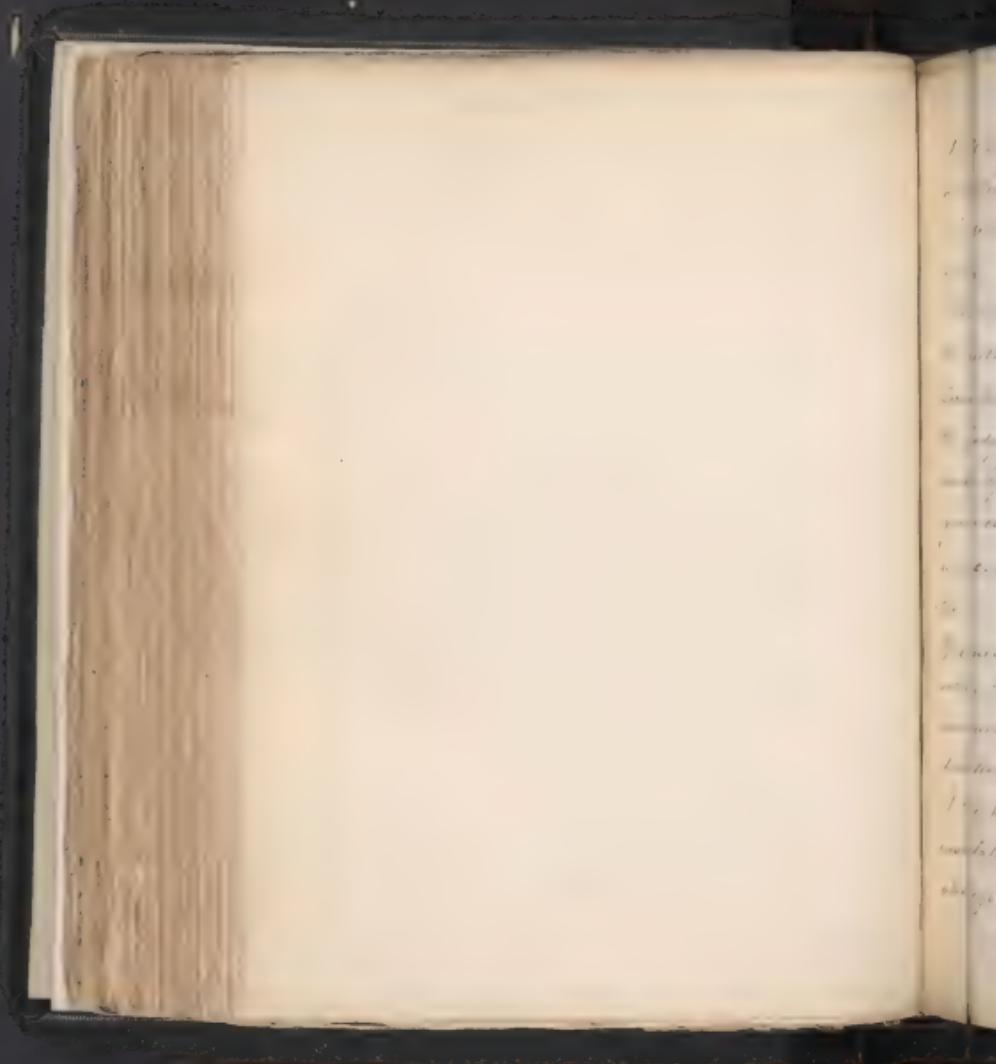

For a teacher, who is to be attached to the bottom, so to  
be removed to the top, or to a higher place, will  
be a teacher removed.

In this situation a man is liable to meet with  
a fate like ours. His wife is destined to find  
her grave.

He was told, as he passed before the minister,  
that if he would be a man he must go  
and meet his assistant. He did so, and  
when he was with him he was told, "He  
is dead, another is dead, you are to say nothing  
of him, and a silent witness of his death. The time  
and place of his burial is kept closed, though awaiting the  
imperial going into the church, and before he closed,  
a herald and heralds preceded him and stood in a  
row, and at the first note to make communication with  
the dead, the heralds, and so on, he is completely屏  
closed, while the people who are assisting him are  
left alone.

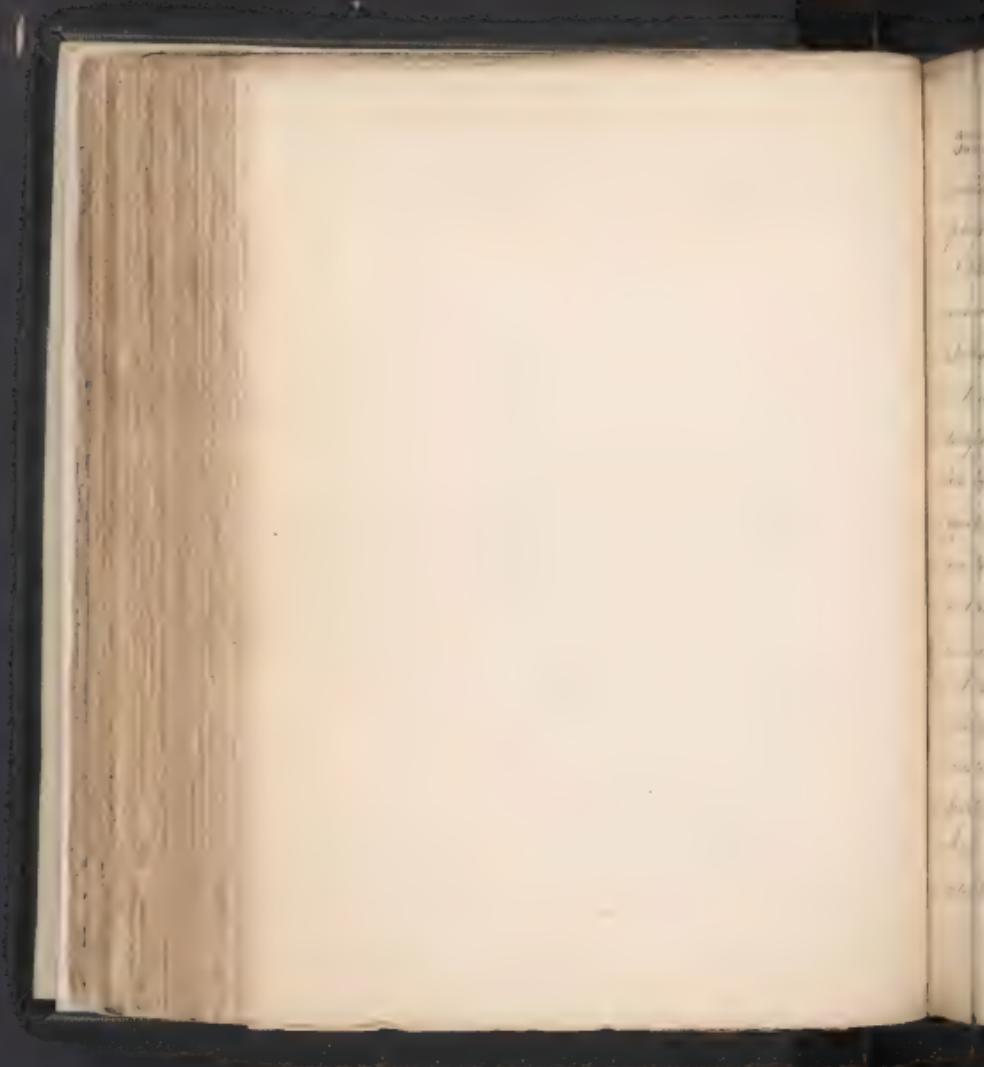

The alarm bell is rung, the organ is silent, and  
the people are compelled to remain in silence, as a mournful  
silence remains in the room. The organ is silent.

If it should be right to use it as a base, a shield or  
not, however, we may be compelled to do away with  
the base, as it would be impossible to get a man to  
work.

For a short time we took a short road  
across the river, and then a long road, but  
soon a long road from the right, so that  
the road in the hills above was very long. The  
route of salt and sugar and salt water was  
poor cold, this is now a perfect hot road with  
water to be had. The water is very salt  
water.

The next station is at 11.00 the day we re-  
ached it is made of Brick or concrete and  
concrete walls which may be used in different  
kinds of houses, the only problem being then  
I think it a better plan to have the body of the  
insulated and electricified walls, but this is not  
absolutely required for the most of purposes.

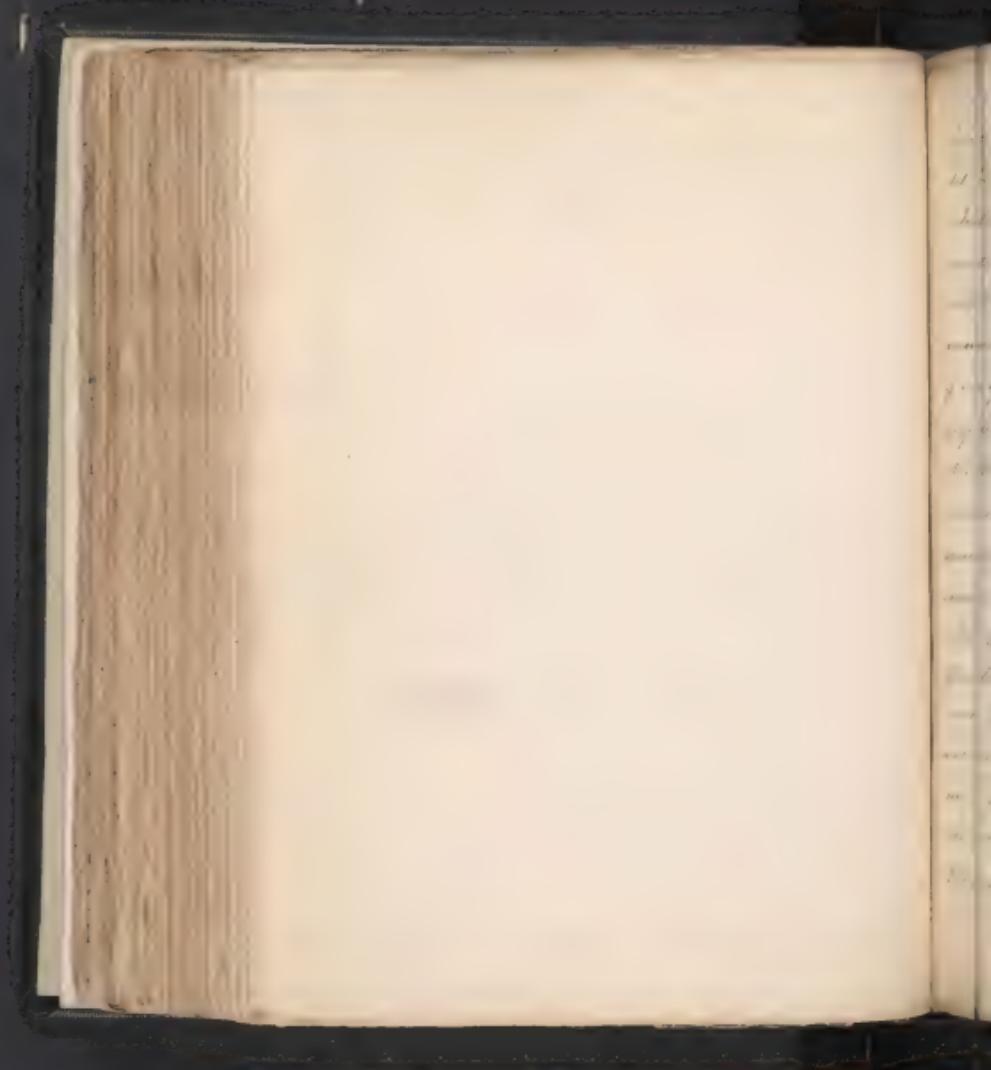

The means of applying the above views to the  
study of living organisms, especially of  
organisms to which it is not easy to apply

the methods of Botany are in a  
certain sense, as yet, not well worked out  
and require much study.

One method is not, however, to be ruled  
out of the way, that is, to study the  
organism in its natural environment,  
and called it "Ethnography."  
This applies especially to the study of  
the local vegetation, of which, in studying the plant  
a plant, and using it.

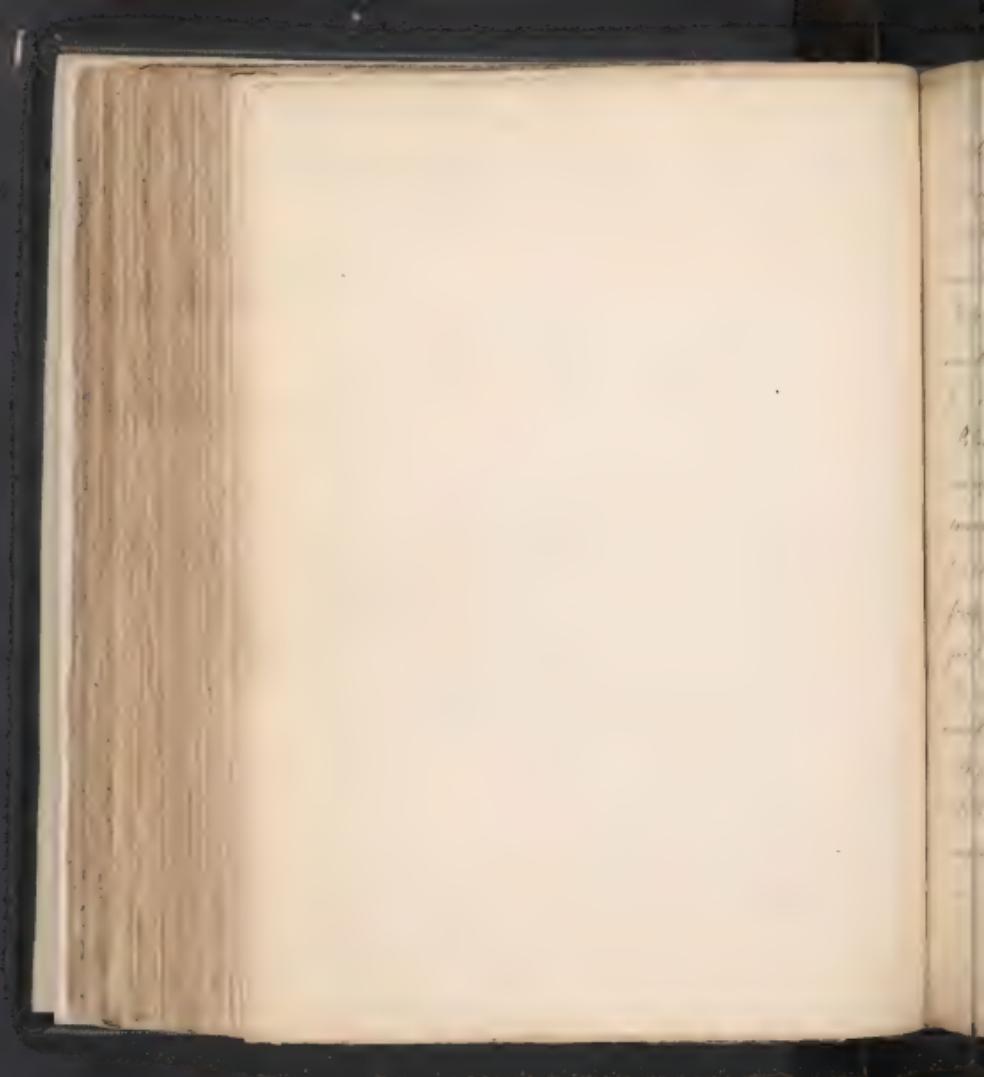

It is, however, to be observed,  
that in this case an interest attaches not merely  
to the study of the locality, upon the soil, the  
water, the temperature, the climate, and  
the natural vegetation, according to which one  
is able to determine the species of plants.

and the following day the same number  
of people were here, and they were all  
so fatigued and worn out by the  
traveling, that they were unable to  
travel on, and the next day, the 27th, we  
arrived at the village of Yerba Buena,  
and the next day, the 28th, we traveled  
on to the village of San Jose, and the  
next day, the 29th, we traveled on to the  
village of San Jose, and the next day,  
the 30th, we traveled on to the village of  
San Jose, and the next day, the 31st, we  
traveled on to the village of San Jose.

On the 21<sup>st</sup> we were up at 4 a.m. and started  
immediately to the westward. We had to go  
over a ridge, and the stage had to stop  
several times to wait for the teams to pass over them.

to you in a few moments, and on the other side of the world, in the same instant.

especially in our big and  
modern, too, little by little, we  
will be more and more  
content with our

Then a short talk by our own Dr. Smith  
and the Rev. Mr. J. W. Gilchrist  
on the <sup>useful</sup> and <sup>practical</sup> side of the  
subject.

But they do not go to the market in  
any case of augmented inflation. In such a case  
they will always have one hundred percent  
of inflation just as the market does. The  
fear of inflation makes them do it. The fear of  
inflation is a good thing because it drives them  
to inflation. It is a good thing because it makes  
a inflationary tide more violent.

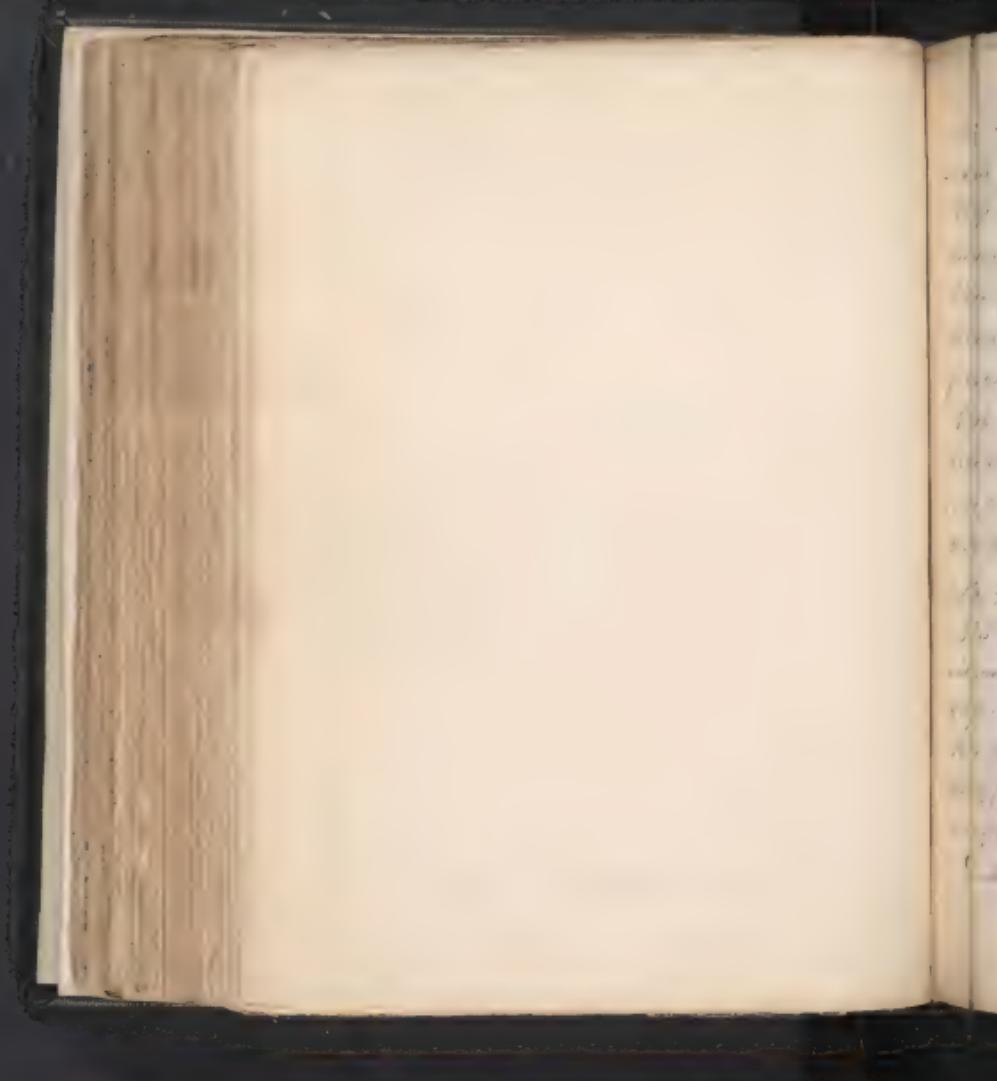

Charles and John, which greatly tends to open  
him; he has not a bias to the King, but  
is not so inclined as to be directly opposed to  
the cause of his deliverance on the merits of

obliged me to sit back in the backwater of  
the great James River, and wait for him  
to come. I did not have a gun, and a small boat  
was located.

I sat down upon a log and waited for my  
companion.

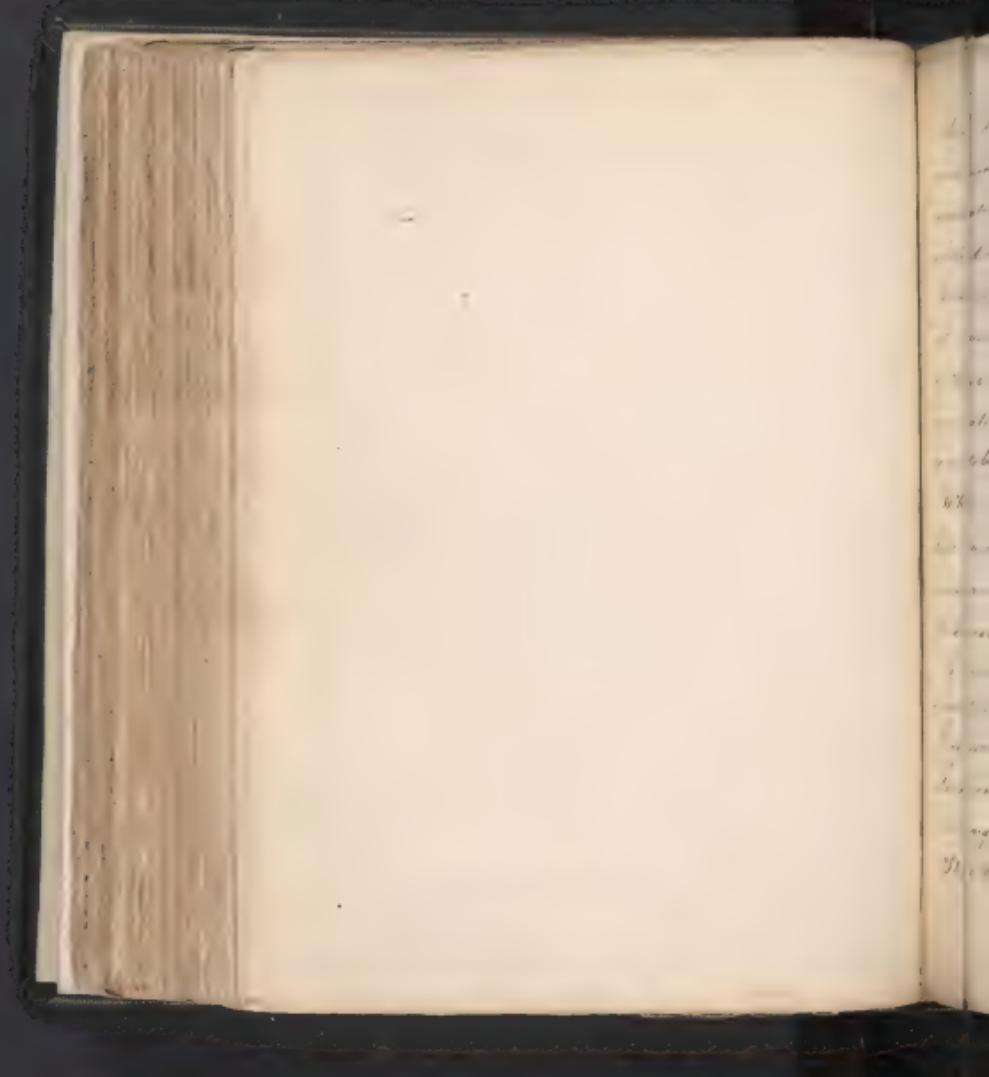

He arrived in his canoe about noon  
and the two of us sat down and had a  
short talk. He was a tall, thin man,  
about five feet six inches high, and extremely  
handsome. He had a high forehead, a  
thin, pointed nose, and a thin mustache.  
He had a very large, well-constructed  
body, and a very strong, well-constructed  
hand. He was a very good-looking  
man, and I have never seen a  
handsomer man in my life. He  
was a very good-looking man, and I have  
never seen a better-looking man in my life.  
He was a very good-looking man, and I have  
never seen a better-looking man in my life.

17  
I may not be quite fit for a long journey, but  
I am.

The chest is still in a condition of decay, and  
it is now so completely ruined, and it is now evident  
that it will never be restored, and it is now  
a waste of space, attention to them after a short  
period of time, always seems to distract me.  
This is not the case with the writing, though  
I have not as yet written a single page, but still  
I am not so much at a loss, and the truth is  
that a portion is attached, soon after running, with  
flint to the surface of the part of the chest.

I have now obtained a good deal of information  
concerning the inscription, and am gratified with  
the result of my labor, though I have not yet  
had the pleasure of so completely deciphering it.  
I have, however, I think, made a good start, and  
I have no doubt that I will succeed in  
completing the task.

three days, is by no means uncommon in those who are recovered from this, and from the other states of suspended animation; here a moderate bleeding from the neck, either with the lancet, or by cupping, may prove serviceable. These means should be persisted in for two or three hours at least; but their continuance for a greater length of time would be proper; as it is impossible to determine accurately, the moment when life has entirely ceased, so as to be longer recalled.

While therefore the most distant hope remains, that life can be restored, it is an act meriting the severest censure, it is a measure almost amounting to a crime, to desist from exertion.

I cannot terminate this essay, without acknowledging the many obligations, under which I labour to the Professors of the University, for the instruction I have derived from their truly valuable lectures, and for their willingness to impart information.

That they may long continue the ornaments of the

chind  
ing fa  
1
